

Nano micron high hardness carbide materials : UK

RD series microstructure via Scanning Electron Microscope

Nano UK microstructure via Scanning Electron Microscope

Lens Mold

UK is mostly used for lens mold or pot and plunger application. UK is the Nano micron binding-less material in pursuit of mirror finished surface and super high hardness.

Average of 200nm grain size has flat and smooth surface roughness increase the usage value of this material.

Please kindly inform us the shape of your product before ordering. Lead time shall be 2 weeks.

Pot & Plunger

There are many material grades will be provided to suites your needs. Please kindly send us an inquiry.
